**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 27 July 2010.  
2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.  
3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### **DETAILED ACTION**

This Office Action is in response to the amendment filed July 27, 2010 for the above identified patent application.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4, 107, 108, and 110 are rejected under 35 U.S.C. 102(b) as being anticipated by Sugiyama (JP 2002-130589).

Sugiyama discloses a spindle unit comprising: a rolling bearing (10) including an outer ring having an outer ring raceway on an inner peripheral surface, an inner ring having an inner ring raceway on an outer peripheral surface, and rolling elements provided rollably between the outer ring raceway and the inner ring raceway, whereby a spindle (5) is borne rotatably in a housing; and a grease supply system for supplying a grease to an inside of the rolling bearing; wherein the grease supply system supplies the grease such that a supply amount in one shot is set to 0.0005 cc to 0.01 cc.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2, 107, 109, and 111 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugiyama (JP 2002-130589) in view of the prior art disclosed by applicant in Figures 113-121 and in pages 1-11 of the Specification.

For example, Figure 115 of the instant application illustrates a ball bearing having a lubrication opening formed in the outer ring, the opening is located in an area other than the raceway groove. It would have been obvious to one of ordinary skill in the art at the time the invention was made to configure the bearing of Sugiyama with a lubrication port spaced from the raceway groove, as taught by the prior art illustrated in Figure 115, motivation being to provide lubricant to the rolling elements without reducing the operating capacity of the raceway surface.

In the written disclosure, applicant discloses that it was known to use a lubricated bearing for a tool spindle. It would have been obvious to one of ordinary skill in the art to use the bearing arrangement of Sugiyama in either a motor spindle or a tool spindle, motivation being to support the shaft/spindle for rotation with reduced friction.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William C. Joyce whose telephone number is (571) 272-7107. The examiner can normally be reached on Monday - Thursday 7:30-5:00.
